

## RULES OF BLACKJACK (21)

**OBJECT:** To get a combination of cards totaling 21 or less without going over 21.

**CARD VALUES:**     Aces = 1 or 11  
                              Face cards = 10  
                              All other cards = face value

Blackjack is a 10 or face card and an ace, and pays 2 to 1. If you get five cards and still have a total of 21 or less, it pays 2 to 1. The dealer must draw a card if his total is 16 or under, and he must stick if his total is 17 or over ("Soft" numbers, such as Ace and a 6, are dealer's choice to hit or stick.) The dealer takes all ties. If you beat the dealer, it pays even. Optional house rules include split pairs, and one card down for double bet -- at player's request.
